

XDASH

XDASH the optimized data visualization for precise welding process control

The modern and efficient presentation and analysis of your welding data

XDASH

PERFORMANCE

The system handles large amounts of data efficiently and displays relevant information clearly at a glance. This allows extensive welding data to be analyzed better. A quick switch from overview to detail and insights into welding results (OK/NOK) and program data are possible.

CHARACTERISTICS

- Can be used with Genius and QuadriGo.
- Web-based visualization methods from the familiar software environment.
- Overview of the number of welds in each module group, names of the modules, welding guns and measuring points used, number of OK/NIO welds per module and the programs with the most "NIO" welds.
- Real-time monitoring of io/nio welds of all systems
- Export panel data to csv.

... and much more
